

# PhylloKare™

## The New Standard in Biostimulants

PhylloKare is a premium *Ascophyllum nodosum* biostimulant produced through a proprietary alkaline extraction process that preserves and concentrates key bioactive compounds. The result is a pure, fully soluble, and highly consistent formulation with 3+ years of shelf stability—delivering stronger abiotic stress resilience, improved nutrient use efficiency, and higher quality yields season after season.

**PhylloKare provides consistent, reliable performance for ornamental growers by delivering three critical advantages that directly impact your investment:**

### Powerful

It strengthens stress tolerance, improves nutrient uptake, and supports stronger root development—driving healthier growth and contributing to higher yield potential even under challenging conditions.

### Versatile

It integrates seamlessly into any production program with broad tankmix compatibility, supports soil health and microbial activity, and offers a sustainable solution suitable for both conventional and organic systems.

### Consistent

It delivers dependable performance thanks to its pure *Ascophyllum nodosum* extract and a proprietary alkaline process that ensures high bioactive content, full solubility, and a stable 3+year shelf life without settling or clogging.

# PhylloKare is not just a biostimulant; it's the gold standard to support growers to a smarter, more productive ROI

## Problem–Solution Fit

Problem Faced	Solution / Benefit	Why It matters
Transplant stress	Faster recovery from transplant shock by supporting osmotic regulation	Vigorous crop development
Poor early crop vigor	Boost root development	Strong roots means better nutrient & water uptake, stimulates faster root initiation and development
Nutrient deficiencies	Improves nutrient availability, utilization & uptake through chelation and enhanced root growth	Improved nutrient use efficiency optimizes resources & boosts yield
Heat, drought, cold snaps, and salt stress	Supports plant resilience to environmental and handling stress	Helps maintain plant quality during production and shipping
Inconsistent flowering and reduced visual quality	Supports improved plant structure and visual quality	Increased marketable yield

## Rates and Application Timings

Apply 9.5 mls to 28.5 mls / gallon either to foliage or the soil every 7-14 days, beginning just prior to and for however long stress conditions are present.

*PhylloKare mixes well with nutrients and other agricultural products.*

## Product details

**Formulation:** Soluble Potash (K<sub>2</sub>O) 5.0%  
Derived from seaweed extract (*Ascophyllum nodosum*) and potassium hydroxide.
